Run of show: Sprint 2 presentation

Second Star Collective · Isa · 26 October 2026 · audience: i.c.stars staff

> What the presentation proves: **the pipeline is built, and every question runs through it end to end.**

Built from the deck on main (719305c, Willis's "Update to presentation", 26 October), Matthew's script, and the talking-point sheets in Git. Willis's and Eliyas's own scripts aren't in Git, so their rows summarise the slides and their old sheets. Their own scripts win wherever they differ. Times are estimates; check them at the dry run.

At a glance

Start	Slide	Presenter	Length	Section
0:00	Opening screen, then the intro animation	Matthew	0:05	
0:05	1 Meet Isa	Matthew	0:25	The plan
0:30	2 Pipeline built	Matthew	0:25	The plan
0:55	3 The problem	Matthew	0:35	The plan
1:30	4 What Isa promises	Matthew	0:35	The plan
2:05	5 One question, ten stages	Matthew	0:50	The plan
2:55	6 Real versus stub	Willis	0:45	What we built
3:40	7 Show the work	Willis	0:40	What we built
4:20	8 Safe by design	Willis	0:50	What we built
5:10	9 For the team	Willis	0:40	What we built
5:50	10 Live demo	Willis	5:00	Demo
10:50	11 Next steps	Eliyas	1:30	What comes next
12:20	12 Additional features	Matthew	0:45	What comes next
13:05	13 Closing	Matthew	0:20	
13:25	Questions	All		

Total: about 13½ minutes before questions. Matthew about 4¼, Willis about 8, Eliyas about 1½.

Hand-offs (thick lines above): Matthew → Willis after slide 5 · Willis → Eliyas after the demo · Eliyas → Matthew after slide 11.

Before we start

☐ Start Docker Desktop and the sign-in server (Keycloak) on the presenting laptop, then Isa.

☐ Sign in as **k.watanabe** (Watanabe Kenji). The chat keeps the sign-in across slides.

☐ Open **/present**. The opening screen shows **Ready**, or **Not ready** with what's wrong. Start only on Ready.

☐ Full screen: `F`.

☐ Keep test scripts and the launcher off screen.

☐ **Never restart Isa during the talk**: ticket numbers start again.

☐ Teams: share the right window; check the text is readable on the call.

Rules for everyone

- Say "the client", never the client's name.
- No model timing (how many seconds an answer takes).
- Say "planned" for anything that isn't built.
- Don't read the slide; tell the story behind it.

Key	What it does
`→` `Space` clicker	Next slide (on the opening screen: start the intro)
`←`	Previous slide
`F`	Full screen
`I`	Replay the intro
`Alt+1` to `Alt+5`	Type demo question 1 to 5 into Isa's chat
`Alt+C`	Show or hide the live Salesforce Cases panel
`Alt+6`	Developer panel (testing console, trace lookup, content import)
`Alt+7`	Content Health panel
`Esc`	Close a panel

Arrow keys typed inside the chat box don't move the slides.

Slide by slide

Opening screen and intro

Matthew · 0:05

Press next on **Ready**. Let the animation play in silence: two Cs roll in and join, the Isa logo spins, and they open onto slide 1.

1 · Meet Isa

Matthew · 0:25

- Welcome; who we are: Matthew, Willis, Eliyas.
- Isa helps the client's volunteer chapter leaders find answers they can trust.
- Cue: point to the chat bubble, bottom right: "That's Isa, live."

2 · Pipeline built

Matthew · 0:25

- This sprint's one goal was the pipeline.
- The plumbing metaphor: the pipes were on the workbench last sprint; now the water runs.
- Honest from the start: some stages are placeholders, and Willis will show which.

3 · The problem

Matthew · 0:35

- The 9 pm volunteer with an election rule question.
- Cue: point to the 6: "That's the whole team."
- Cue: point to the two panels: Isa answers what's written down, and gets the rest to a person.

4 · What Isa promises

Matthew · 0:35

- What each card means, not its title: nothing outside the client's documents; nothing behind a curtain; Isa knows her limits, and the leader gets a number.

5 · One question, ten stages

Matthew · 0:50

- Let the stages light up first. Follow one question through, in plain words.
- Cue: blue bar: the AI never wakes up. Dark blue bar: the AI pieces it together, only from what Isa found. Green bar: a person.
- Hand-off line: "Willis is going to show you what's actually working, and then let Isa prove it live."

Matthew doesn't click. Slide 6 is Willis's.

6 · Real versus stub

Willis · 0:45

On screen, the ten stages coloured by status:

- **Built (5):** front end; access control; database search; complex AI; ticketing (reference number, and a Salesforce Case for a person to pick up).
- **Partly built (2):** RAG (finds passages by meaning; vector search to come); output compliance (checks the source is approved and was found).
- **Stub (3):** translation (detects the language only); input compliance (simple keyword rules); knowledge graph.
- Key point: the honest scorecard. The AI model runs locally, so nothing leaves the machine.

Correction to Willis's old sheet: it says ticketing is "partly built" and groups the stages 4 / 3 / 3. The deck now says ticketing is built: 5 / 2 / 3.

7 · Show the work

Willis · 0:40

- Every answer has a one-line summary, and the leader can open it to see each step.
- Plain language for volunteers; a developer view shows the raw events.

8 · Safe by design

Willis · 0:50

New layout on main: four failures (a failed model call, a source that wasn't found, a sensitive topic, a crashed stage), each with an arrow into one bar, **"Hand-off to a person, never a wrong answer."** Beside them, a lock box: private by default.

- Key point: when something goes wrong, Isa fails safe.

Don't rush this slide. The AI model starts warming up here, ready for the demo.

9 · For the team

Willis · 0:40

- **Developer dashboard:** role-gated; testing console and trace lookup, and content import.
- **Content Health dashboard:** for support managers, how the approved content is holding up.
- Both open as panels over the slides: `Alt+6` and `Alt+7`, `Esc` to close.

Correction to Willis's old sheet: the dashboard no longer lists "Salesforce settings".

10 · Live demo

Willis · about 5:00

Signed in as k.watanabe. The demo questions are the team's own, chosen and checked in advance. A couple are meant to go wrong, to show how the system handles it.

Step on the slide	Key	Question built into the deck	What it shows
1 A direct answer	`Alt+1`	How many board meetings must a chapter hold each year?	Straight from approved text; the AI steps are skipped
2 A question the AI helps with	`Alt+2`	Who writes down what the board decided?	The AI path, written only from the passages found
3 An off-topic question	`Alt+3`	Where's a good pizza place near the conference?	The question check stops it; no ticket
4 Not covered by Isa's content	`Alt+4`	What is the cryptocurrency policy?	Passed to a person with a reference number; `Alt+C` shows the Salesforce Case
5 A sensitive topic	`Alt+5`	A board member keeps harassing me, what should I do?	Careful wording, a safety line, a ticket
6 Backstage: tracing one question	`Alt+6`		Trace lookup: one question, stage by stage

- Open "show the work" on at least one answer.
- Name each question's path (short road, AI road, to a person) to tie back to slide 5.
- **Hand-off line:** "That's what works today. Eliyas will walk you through what comes next."

11 · Next steps

Eliyas · 1:30

In priority order, six items:

1. **Real translation:** LibreTranslate / Argos, self-hosted, plus a second self-hosted model for languages it doesn't cover (Amharic, Oromo, Somali, Tigrinya).
2. **Real input rules:** rule-based checks instead of the keyword stub.
3. **Vector search and RAG:** embedding search instead of the meaning map.
4. **Knowledge graph:** related topics from linked sections.
5. **Output compliance:** the answer-check and confidence layers.
6. **Measuring quality:** accuracy sampling and a feedback loop.

- Key point: every stub Willis showed has a plan.
- Hand-off: to Matthew.

Corrections to Eliyas's old sheet: "Salesforce tickets" is no longer on this slide (ticketing is built), so there are six items, not seven. And slide 12 is now Matthew's.

12 · Additional features

Matthew · 0:45

- "Thanks, Eliyas."
- **Left, built and being refined:** onboarding (the first 90 days) and the succession notebook. Both work in the app today.
- **Right, planned:** peer content panel, offline packages, Android app, Chrome extension, multi-model testing. None are built.

13 · Closing

Matthew · 0:20

- Let them read the line first.
- "That's sprint 2. What we set out to build is built, and it's working."
- Thanks; invite questions.

Questions

All

- Pipeline, stages, status: Willis · Next steps, translation: Eliyas · The problem, the promises, additional features: Matthew.

If we're running long

- Slide 3: skip the 9 pm story.
- Slide 5: skip the walk through the stages; keep the three bars.
- Demo: skip step 6 (Backstage), or show `Alt+6` only briefly.
- Slide 12: one sentence: "The two on the left work today; the right side is planned."

Still to agree at the dry run

☐ Who holds the clicker, and how it passes at each hand-off.

☐ Each person's real timing, against the estimates.

☐ Who answers which questions.
